

MIDNIGHT BUILDATHON · WAVE 2

Lixi

Private red envelopes on Midnight.

Every light is one lì xì. Only its link knows whose.

lixi-3nv.pages.dev · github.com/hms1499/lixi-midnight

Red packets on chain are public

Mask HappyRedPacket

EVM and Solana

Red Envelopes

BNB Smart Chain

IRISnet

Cosmos

Every amount, every recipient and the whole split sit on chain for anyone to read.

A real lì xì is private: only the giver and the receiver know what is inside.

Every light is one lì xì.

Only its link knows whose.

The sender seals tNIGHT into up to 16 lì xì and sends each person a link. The chain keeps a fingerprint of the split, never the split.

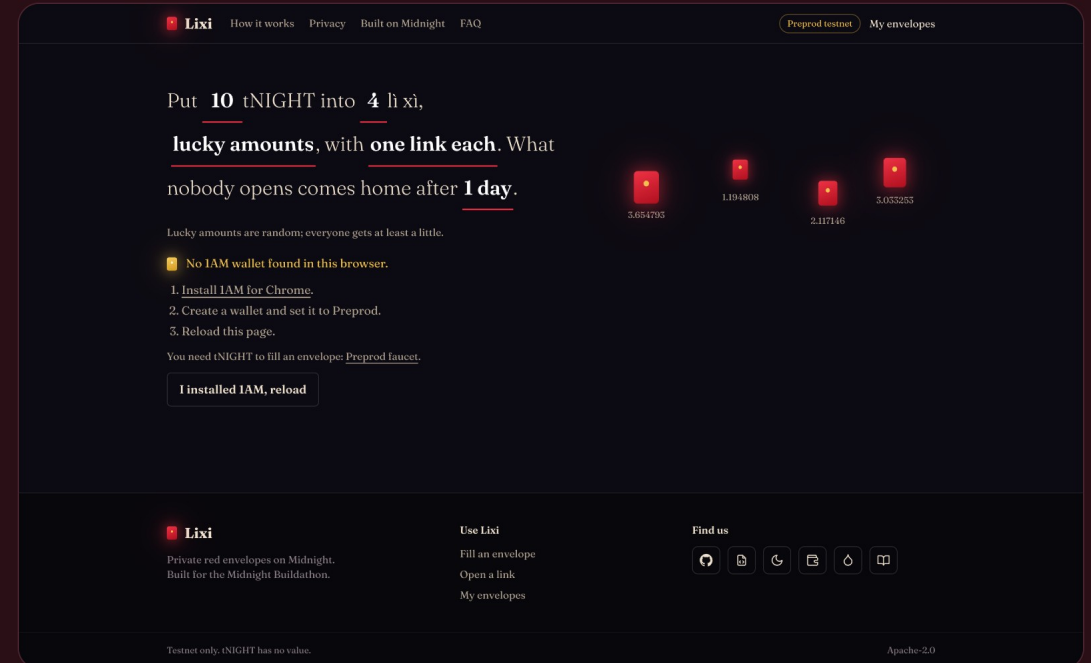

Seal, share, open, bring home

Seal. Write the envelope as a sentence; lucky or equal amounts.

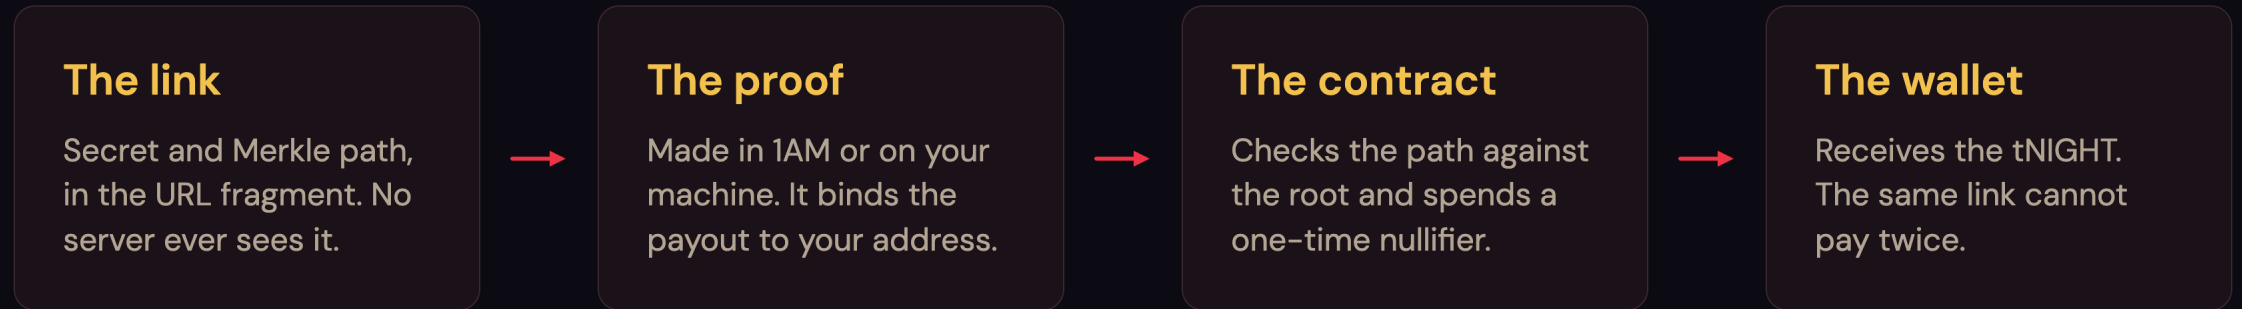

Share. One link per lì xì, or one group link.

Open. A proof claims it; tNIGHT lands in the wallet.

Bring home. After expiry, what nobody opened goes back.

How a claim stays private

The proof says "I hold a valid lì xì" without saying which one.

What the chain sees

The chain sees	It never sees
That an envelope exists, its total and its expiry	With lucky amounts, how many lì xì a personal envelope holds
Whether it uses a group link	With lucky amounts, the sizes of the lì xì nobody has opened
The sender's address	Which link paid which opening
Each opening: who received, and how much	The secrets inside the links

Payouts are unshielded tNIGHT, so each opening is public. Equal splits, and every group link, reveal the count and the sizes at the first opening.

Built on Midnight

One Compact contract

createEnvelope, claim and refund. Per envelope it stores a Merkle root, the deposit, the expiry, the refund address and the group flag; never the split.

Dual ledger

The share and its path are private witnesses; the root and spent nullifiers are public state; the payout is unshielded tNIGHT.

Proving in the wallet or locally

Proofs are made in 1AM by default, or by a proof server on your own machine. Lixi itself never sends one to a shared server; where 1AM proves is not yet verified.

No admin key

The maintenance authority is given up at deploy, so nobody can change the contract.

Tested end to end

267

tests in four suites; the contract, SDK and app tests run against the real compiled contract.

Suite	Tests	Covers
contract	32	circuits, forged paths
sdk	44	splits, links, vault
cli	19	config, redaction
app	172	every page, CSP

CI on every push · devnet end-to-end: deploy, concurrent claims, refund · a design audit with its fixes

Who it is for

Tết lucky money

Weddings

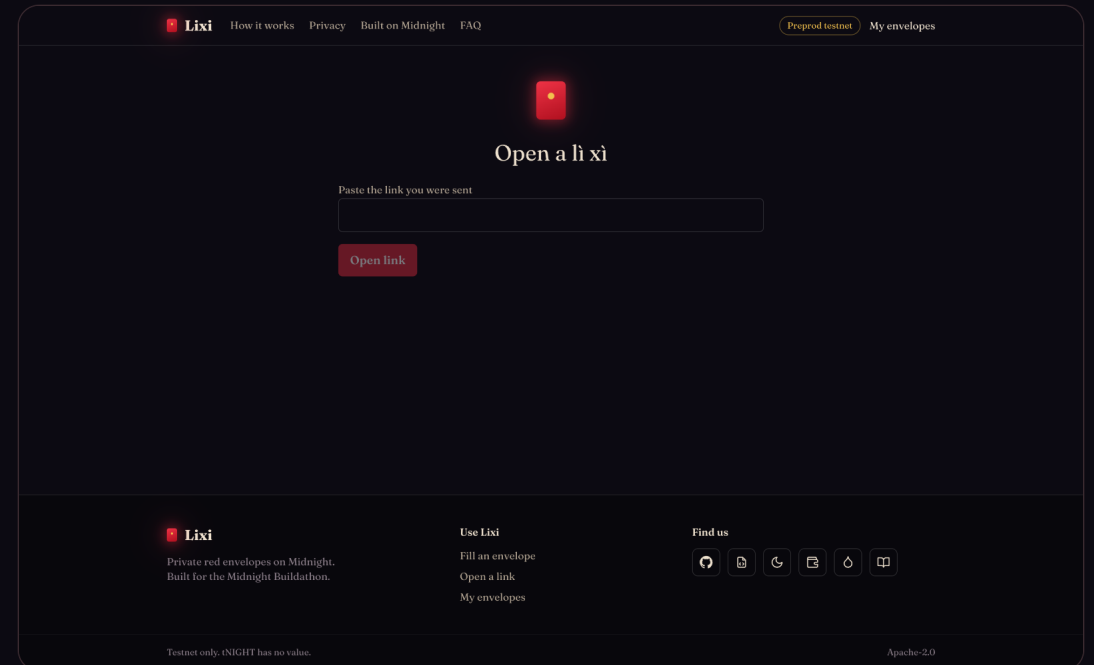

Birthdays

Team bonuses

Community giveaways

Personal links for family; one group link, one lì xì per wallet, for a crowd. Recipients see what is inside before they connect.

No red-envelope entry among the ~161 Wave 1 submissions.

Lì xì already went digital

823M

people sent or received WeChat red packets over Lunar New Year 2019

8M+

MoMo users sent money or lì xì in the app at Tết 2021

#4

Vietnam on the Chainalysis 2025 Global Crypto Adoption Index

Digital red packets are everyday behaviour. On chain they are public. Lixi is the private one.

Adoption path

1 · Now

Midnight community

Giveaways and event drops with one group link: one lì xì per wallet, no address list to collect.

2 · Tết 2027

Vietnamese crypto groups

A Tết campaign in February 2027 for Vietnam's crypto communities, once Lixi runs on mainnet.

3 · Wallets

Lì xì inside the wallet

A send-a-lì-xì button in 1AM, then the 1AM mobile app, where lì xì is actually given.

For Midnight: a private payment ordinary people want to try, and a claim pattern, a Merkle root plus a nullifier, that any private airdrop can reuse.

How it sustains itself

Free for people

Personal envelopes for family and friends stay free. They are how people find Lixi.

Paid branded envelopes

Companies and communities pay for their own envelope design and a campaign dashboard: who opened, what is left, bring home.

Grants

Midnight ecosystem grants fund the open-source core.

No fee in the contract: the paid layer is design and tooling, so the contract stays immutable and every lì xì arrives whole.

Wave 3

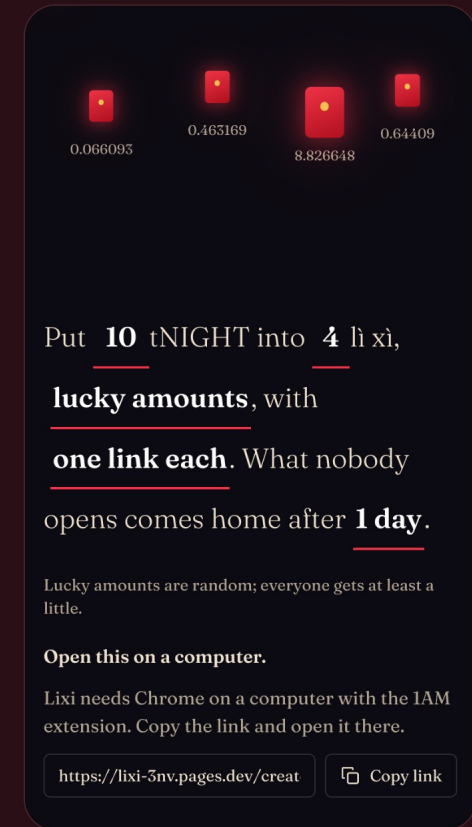

Mobile. Open lì xì from the 1AM mobile app.

Fees for any wallet. A sponsor, so recipients need no DUST.

Shielded payouts. Hide each opening too.

Bigger envelopes. More than 16 lì xì.

QR codes. For giving lì xì in person.

Today a phone hands the link to a computer.

Open a lì xì

Where	Link
Live site	lixi-3nv.pages.dev
Code	github.com/hms1499/lixi-midnight
Contract	Preprod · deployments/preprod.json
Video	[video link, added by the team]

Chrome on a computer with the 1AM wallet, set to Preprod. 1AM pays the fee.
